

PLUGNGO

What is PlugNGo?

PlugNGO is the newest tool to help you drive faster, smoother. It removes delays in the accelerator to help you manoeuvre your car easily-even on difficult terrain!

PlugNGO alters the acceleration curve on electronic throttle controlled vehicles. It digitally alters the shape of the curve increasing throttle response and improving your overall driving experience.

If you fit a PlugNGO then you're guaranteed to discover the real performance of your vehicle.

PlugNGO improves acceleration times whilst overtaking and during hill starts. It's safe and easy to use, just plug and go!

IMPROVING

Removes accelerator delay & improves throttle response

MODES

Sport, Sport + and Eco/Off-Road Modes

RESPONSE

Quicker response at low engine RPM

COMPATIBILITY

Compatible with most vehicle types

Accelerator pedal ratio
Throttle Character Comparison Chart

Why choose it?

IMMEDIATE RESULTS!

PROVEN & SAFE!

FASTER THROTTLE RESPONSE

PlugNGO has been developed to increase throttle response in modern cars by removing delays in the accelerator to enhance driveability. It also improves your safety by improving acceleration times while overtaking and during hill starts.

INSTANT ACCELERATION

Throttle Boost! In modern vehicles, the accelerator cables have been replaced by an electronic system that acts as a speed regulator. However, this speed regulator also delays the vehicle response to the pedal, effectively delaying acceleration.

PlugNGO shortens response time and lets you accelerate faster, easier.

How does PlugNGO work?

CURVE ADJUSTMENT

Choose from six levels to optimize the curve. You can increase the curve through 3 levels and reduce it through 3 levels.

4 MODES

OFF mode for driving on very slippery road surfaces brought about by ice, snow, or heavy rain.

In **Sport** mode, throttle response is increased by up to 16% and is suitable for most situations.

Perfect for merging quickly with road traffic or when overtaking is required.

ECO/Off Road mode is suitable for stop and go driving. It guarantees improved response in the lower rpm range and is programmed to achieve economical fuel consumption.
